

Purpose and scope

Procedure QUAL-LOAD-001

DOCUMENT ID
SOP-QUAL-LOAD
EFFECTIVE DATE
2026-08-10
CLASSIFICATION
Synthetic hackathon fixture

REVISION
1
OWNER
Plant-A Qualification Laboratory

Purpose

- Verify candidate load capability when catalog evidence is missing or disputed.
- Supports REQ-LOAD-001 for MAT-BRG-001 alternatives.

Boundary

- Use only when Engineering requests physical verification.
- A test result does not override a dimensional mismatch.

Test method

Radial load endurance verification

DOCUMENT ID SOP-QUAL-LOAD	REVISION 1
EFFECTIVE DATE 2026-08-10	OWNER Plant-A Qualification Laboratory
CLASSIFICATION Synthetic hackathon fixture	

Method

- Confirm the candidate is dimensionally installable.
- Apply the defined radial load profile.
- Run for 8 working hours.
- Record vibration, noise, temperature, and damage indicators.

Controls

- Calibrate load cell before execution.
- Trace all samples to candidate and lot identifiers.

Acceptance and disposition

Evidence requirements

Acceptance criteria

- No race, cage, or rolling-element damage.
- No abnormal vibration increase.
- Measured capability supports at least 14 kN dynamic rating.

Disposition

- PASS supports the load requirement only.
- FAIL is evidence of mismatch.
- INCONCLUSIVE remains UNKNOWN and requires review.
