Plant-A Quality Systems

Purpose

- Define evidence, review, and authorization required before production use.
- Applies to unqualified candidates and temporary deviations.

Roles

- Engineering reviews technical evidence.
- Quality reviews qualification and release controls.
- Production may consume material only after current release is recorded.

Release prerequisites

All gates must be satisfied

Plant-A Quality Systems

Required gates

- Current candidate identity and source revision verified.
- All hard requirements are MATCH.
- Critical requirements are MATCH or covered by a current authorized disposition.
- Qualification tasks are complete with accepted results.
- Engineering and Quality approvals reference the current case version.

Fail-closed rules

- UNKNOWN is not MATCH.
- Expired deviations are invalid.
- Stale case or evidence versions invalidate authorization.

Action boundary and records

Qualification task approval is not production release

DOCUMENT ID
PROC-QA-RELEASE
EFFECTIVE DATE
2026-09-05
CLASSIFICATION
Synthetic hackathon fixture

REVISION
3
OWNER
Plant-A Quality Systems

Action boundary

- A reviewer may authorize creation of a qualification task.
- That authorization permits the task only.
- Production release remains blocked until Quality records a separate release decision.

Audit record

- Record approver identity and role.
- Bind approval to case version and case hash.
- Enforce approval expiry and idempotency.
- Store an action receipt for controlled writes.

Human Quality authority is required for final production release.
